The SiNAs may or may not comprise ribonucleotides and may be double or single CC stranded. They further comprise sense and antisense regions, or CC alternatively are assembled from a sense oligonucleotide and an antisense CC oligonucleotide. Specifically, the siNAs include short interfering RNA CC (siRNA), double-stranded RNA, micro-RNA (miRNA) and short hairpin RNA CC (shRNA). The siNAs can be unmodified or chemically modified, can contain CC (shRNA). The siNAs can be unmodified or chemically modified, can contain CC (shRNA) in vitro or in vivo delivery of siNA; conjugates and/or complexes CC for the in vitro or in vivo delivery of siNA; conjugates and/or complexes CC for siNA; and vectors that express siNA. The siNAs are used to modulate coff siNA; conjugates and/or complexes CC of siNA; and vectors that express siNA. The siNAs are used to modulate CC by ex vivo gene therapy), or in grafts and transplants for the treatment CC of a variety of conditions. The human G72 siNAs have neuroleptic activity and can be used for treating schizophrenia. The siNAs are also useful for conflictions of the capture of conditions of the capture of conditions of the capture of c

The invention relates to short interfering nucleic acids (siNA) which CC downregulate expression of the human G72 gene by RNA interference. The CC siNAs may or may not comprise ribonucleotides and may be double or single CC stranded. They further comprise sense and antisense regions, or CC alternatively are assembled from a sense oligonucleotide and an antisense CC oligonucleotide. Specifically, the siNAs include short interfering RNA CC (siRNA), double-stranded RNA, micro-RNA (miRNA) and short hairpin RNA CC (shRNA). The siNAs can be unmodified or chemically modified, can contain CC debxyribonucleotides, and can be chemically mynthesised, expressed from a CC vector or enzymatically synthesised. The invention also relates to kits CC for the in vitro or in vivo delivery of siNA; conjugates and/or complexes CC of siNA; and vectors that express siNA. The siNAs are used to modulate CC expression of the G72 gene in cells, tissue explants or organisms (e.g., by ex vivo gene therapy), or in grafts and transplants for the treatment CC and can be used for treating schizophrenia. The siNAs are also useful for CC drug screening, diagnosis, therapeutic target identification and CC validation, genetic engineering, pharmacogenomics, studying gene CC function, and gene mapping (e.g., of single nucleotide polymorphisms). The present sequence represents the upper strand of a human G72-targeted. CC double-stranded siNA, which is identical to the G72 transcript target.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                20-FEB-2002;

The composition comprises DNA encoding interferon (IFN)-gamma and may be administered to the patient by intranasal gene transfer. It is useful for treating respiratory viral infections, especially respiratory syncytial virus (RSV). The composition of the invention may be administered to an infant or other immunosuppressed individuals
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 20 BP; 5 A; 4 C; 5 G; 6 T; 0 U; 0 Other;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New gene therapy composition useful infections, particularly RSV.

                                                                                                                                                                                                                                                                                                                                                                                                                     This is an II-5 mRNA target sequence (nucleotide no. 10) of an enzymatic RNA molecule (ribozyme) which cleaves mRNA associated with the development or maintenance of a psoriatic or asthmatic condition. The concur. of the ribozyme necessary to effect a therapeutic treatment is lower than that of an antisense oligonucleotide and the specificity of action is higher. (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Interleukin-5; specific; cleavage; target RNA; protein; expression;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  á
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present sequence is the human interleukin-5 (hII-5) promoter mutant palindromic regulatory element (PRE1-3), which inhibits the activity of the hII-5 promoter and therefore II-5 expression. PRE1-3 can be used to modulate II-5 activity by acting on the corresponding region of the hII-5 promoter, especially in cases of asthma and eosinophilia or in immunocompromised subjects. PRE1-3 specifically inhibits transcription from the II-5 promoter, as no such sequence is present in genes encoding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 21
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Example 4; Page 14; 50pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          á
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   និនិនិនិនិនិនិ
The invention relates to an antisense compound of 8-30 nucleobases in CC length, which modulates interleukin (IL)-5 signal transduction. Also CC include are a pharmaceutical composition comprising the antisense CC oligonucleotide and a pharmaceutically acceptable carrier or diluent, and a diagnostic kit for detecting the expression level of the membrane form CC versus soluble form of IL-5 receptor a. The antisense compound is useful CC for modulating IL-5 signal transduction, modulating expression of mammalian IL-5 or modulating the expression of mammalian IL-5 receptor a, in cells or tissues, for altering the ratio of the isoforms of mammalian CC in cells or tissues, for altering the ratio of the isoforms of mammalian CC having a disease or condition associated with IL-5 signal transduction, CC IL-5 expression or IL-5 receptor a expression, where the disease or condition include eosinophilic syndrome or asthma. An antisense compound which alters splicing of an RNA encoding IL-5 receptor a is also useful for treating a mammal having a disease or condition. The present sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        designed to target nucleic acids encoding II-5 and II-5 receptor-alpha. The antisense oligonucleotides may be used for the treatment of diseases associated with II-5 signal transduction, II-5 expression or II-5 receptor-alpha expression. Such diseases include asthma and eosinophilic syndrome. The oligonucleotides are also useful for research uses and to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Novel antisense compound for treating disease/condition e.g. eosinophilic syndrome or asthma associated with interleukin-5 or IL-5 receptor expression or IL-5 signal transduction, modulates IL-5 signal

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Ş
The invention relates to a novel pharmaceutical composition, which has a cliret active agent comprising an oligonucleotide antisense to the cinitiation codon, coding region, 5' or and genomic flanking regions, 5' or and attive agent comprising an oligonucleotide antisense to the composition codon, coding region, 5' or and genomic flanking regions, 5' or and attive composition and a second active agent comprising an compassion of genes encoding a polypeptide associated with lung and/or compassion and a second active agent comprising an antisinflammatory servoid and ubiquinone. A composition of the invention composition and the invention composition may have a composition may have a cuse in antisense gene therapy. The composition is useful for treating or preventing a respiratory, lung or malignant disease or condition, also composition gene therapy. The composition is useful for treating or preventing a respiratory, lung or malignant disease or condition, also composition as abject, to reducing or depleting levels of antiinflammatory steroid in a subject, for reducing levels of adenosine receptor, producing bronchodilation, increasing levels of adenosine or colling inflammation, lung allergies, or a respiratory disease or condition. CC lung inflammation, lung allergies, or a respiratory disease or condition. CC specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ঠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 SXS
This invention describes a novel composition (a) a first active agent, comprising oligonucleotides, effective for alleviating bronchoconstriction, respiratory tract inflammation, allergies and reducing adenosine sensitivity, levels of adenosine (A) or (A) receptors, surfactant depletion or hyposecretion, when administered to a mammal. The oligonucleotides are derived from a gene encoding or regulating expression of a target polypeptide associated with lung alivay or lung dysfunction or cancer and can be anti-sense to the corresponding mRNA. The invention also describes a kit, that comprises: (a) a delivery device, in separate containers, (b) the oligonucleotides, (c) instructions for adding a carrier and for use of the kit. The composition of the invention has antiallergic, antianflammatory, antiasthmatic, analgesic, hypotensive, immunosuppressive and cytostatic activity, is a beta-adrenergic agonist. The composition is useful for preventing or treating a respiratory, lung or malignant disease. The administered composition comprises oligo and is administered to reduce the production or availability, or to increase the degradation of the target mRNA or to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match

The reduced adenosine content of the anti-sense oligos corresponding to thymidines present in the target RNA serves to prevent the breakdown of the oligonuclectides into products that free adenosine into the system e.g., lung, brain, heart, kidney, etc, tissue environment and thereby, to
specifically hybridizes with and inhibits the expression of Navi.3. The compound and composition are useful for treating a disease or condition associated with Navi.3, e.g. pain including but not limited to neuropathic pain, post-herpetic neuralgia, chronic pain, lower back pain, diabetic neuropathy, trigeminal neuropathy, arthritic pain, acute pain, pain from burns, migraine headache, cluster headache, mild-to-moderate headache, seizure disorder such as childhood seizure disorder, including but not limited to neonatal or infantile epilepsy; or ataxia. The present sequence represents a chimeric phosphorothioate oligonucleotide with
                                                                                                                                                                                                                                                                                                                                                                              Claim 4;
                                                                                                                                                                                                                                                                                                                                                                                                                                       with Nav1.3, e.g. pain, disorder, or ataxia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                New antisense compound targeted to a nucleic acid molecule encoding Nav1.3, useful for useful for treating a disease or condition associated with Nav1.3, e.g. pain, seizure disorder such as childhood seizure
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        26-FEB-2004

                         The present invention relates to an antisense compound targeted to a nucleic acid molecule encoding Navl.3, where the antisense compound specifically hybridizes with and inhibits the expression of Navl.3. The compound and composition are useful for treating a disease or condition associated with Navl.3, e.g. pain including but not limited to neuropathic pain, post-herpetic neuralgia, chronic pain, lower back pain, diabetic neuropathy, trigeminal neuropathy, arthritic pain, acute pain, pain from burns, migraine headache, cluster headache, mild-to-moderate headache; seizure disorder such as childhood seizure disorder, including but not limited to neonatal or infantile epilepsy, or ataxia. The present sequence represents a chimeric phosphorothioate oligonucleotide with 2°MOE wings and a deoxy gap. Used during the antisense inhibition of human Navl.3 expression, the oligonucleotides are designed to target different regions of the human Navl.3 RNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         2'MOE wings and a deoxy gap. Used during the antisense inhibition of human Navl.3 expression, the oligonucleotides are designed to target different regions of the human Navl.3 RNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ADK79309

                                        The invention relates to an antisense compound that modulates interleukin CC -5 (IL-5) signal transduction. The antisense compound is an antisense CC oligonucleotide targeted to a nucleic acid molecule encoding a mammalian CC IL-5 or IL-5 receptor a, where the antisense compound modulates the CC expression of mammalian IL-5 or IL-5 receptor a. The antisense compound modulates the CC oligonucleotide comprises at least one modified internucleoside linkage, i.e. a 2'-0-methoxyethyl sugar molety, and at least one modified sugar molety, i.e. a 2'-0-methoxyethyl sugar molety, and at CC least one modified nucleobase, i.e. 5-methylytosine. Altering the ratio CC of the isoforms of mammalian IL-5 receptor a in mammalian cells or tissues comprises contacting the cells or tissues with an antisense CC compound so that the ratio of the mammalian IL-5 receptor a isoforms is altered. Treating a mammal having a disease or condition sasociated with CIL-5 signal transduction or IL-5 or IL-5 receptor a expression, or a CC disease or condition characterised by a reduction in apoptosis comprises CC administering to the mammal a therapeutic or prophylactic amount of an antisense compound so that IL-5 signal transduction, IL-5 or IL-5
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      IL-5 receptor a; phosphorothioate; 2'-0-methoxyethyl sugar moiety; 5-methylcytosine; IL-5 signal transduction; apoptosis; eosinophilic syndrome; asthma; antiasthmatic; cytostatic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Murine interleukin-5 (IL-5) DNA antisense
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New antisense compound modulating useful in promoting apoptosis and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           06-OCT-2003; 2003US-00679532

                                                                                                                                                       primer A800 and SATG (AAV32486) were used in the method of the invention to determine the prevelance of cDNA clones with a 114 bp deletion in the human retinaldehyde binding protein HRGR1-2 cDNA (AAV32476). The HRGR1-7 cDNA (AAV32477) of clone HRGR1-7, isolated from a human lambda-gt10 retinal library, was found to contain the deleted region which corresponded to the nucleotide sequence of exon 6 (AAV32483) of the human retinaldehyde binding protein gene. The human retinal and all-trans protein HRGR1-2 (AAW48858) binds both 11-cis-retinal and all-trans retinal. The invention claims that molecular aberration of the visual system can be detected in binding seasys by observing any changes in the binding of the retinaldehyde binding protein HRGR1-2 to its chromophores. The retinaldehyde binding protein hrgr1-2 can also be used to raise antibodies, which in turn can be used to detect changes of the protein in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human retinaldehyde binding protein HRGR1-2; retinal pigment epithelium; 11-cis-retinal; all-trans retinal; visual system; binding assay; chromophore; PCR; primer; amplification; ss.
                                                                                                                                                                                                                                                                                                                                                                                              Human and bovine retin-aldehyde-binding proteins - used to detect aberration(s) of retinal binding in visual excitation systems.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human retinaldehyde binding protein HRGR1-2 cDNA primer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 11-SEP-1998

C. pneumoniae causes respiratory disease such as pneumonia and bronchitis and is thought to be a contributing factor in heart disease, sarcoidosis, sinusitis, purulent otitis media, erythema nodosum or pharyngitis. The polypeptides encoded by the open reading frames of the C. pneumoniae genome (see AAY34584- AAY35879) can be used in immunogenic compositions as vaccines. Vectors containing C. pneumoniae nucleotides sequences can also be used as immunogenic compositions, especially where the vector directs the expression of a neutralising
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Respiratory disease; pneumonia; bronchitis; heart disease; sarcoidosis; sinusitis; purulent otitis media; erythema nodosum; pharyngitis; vaccine; neutralising epitope; PCR primer; ss.

Retinaldehyde binding protein is the first light-absorbing vertebrate protein identified to stably and preferentially bind the all-trans-retinal chromophore. Retinaldehyde binding proteins have distant homology to other G protein-coupled receptors, possessing seven transmembrane domains. The nucleic acid and encoded protein are useful for assaying changes in the structure or the retinaldehyde-binding proteins which would be indicative of a molecular aberration in the retinal pigment epithelium, visual system or brain. The nucleic acid is also useful in antisense therapeutics and in the recombinant expression of retinaldehyde-binding protein. Sequences ARZ55848-Z55848 represent probes or PCR primers used in exemplifications

The composition is useful for treating or CC immunosuppressive, and cytostatic activity. The composition may have a cuse in antiense gene therapy. The composition is useful for treating or CC preventing a respiratory, lung or malignant disease or condition, also CC for enhancing the prophylactic or therapeutic respiratory effect of an CC antiinflammatory steroid in a subject, for reducing or depleting levels of or reducing sensitivity to adenosine, reducing levels of adenosine cof or reducing sensitivity to adenosine, reducing levels of adenosine or CC lung surfactant in a subject s tissue, or treating bronchoconstriction, CC lung inflammation, lung allergies, or a respiratory disease or condition. CC lung inflammation, but was obtained in electronic format directly from WIPO CC at figure in the printed CC specification, but was obtained in electronic format directly from WIPO CC at figure in the printed CC specification, but was obtained in electronic format directly from WIPO CC at figure in the printed CC specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match

comprising oligonucleotides, effective for alleviating composition (a) a first active agent, ccomprising oligonucleotides, effective for alleviating pronchoconstriction, respiratory tract inflammation, allergies and creducing adenosine sensitivity, levels of adenosine (A) or (A) receptors, comparison of a target polyposecretion, when administered to a mammal. The oligonucleotides are derived from a gene encoding or regulating continuous or cancer and can be anti-sense to the corresponding mRNA. The invention also describes a kit, that comprises: (a) a delivery constructions for adding a carrier and for use of the kit. The composition of the invention has antiallergic, antiinflammatory, antiasthmatic, considered in the invention has antiallergic, antiinflammatory, antiasthmatic, considered adrenergic agonist. The composition is useful for preventing or treating a respiratory, lung or malignant disease. The administered composition comprises oligo and is administered to reduce the amount of target polypoptide present in the lungs. The pulmonary obstruction, and/or bronchoconstriction and/or lung confilammation, allergies and/or bronchoconstriction and/or lung confilammation, allergies, asthma, impeded respiratory, respiratory confilammation, allergies, asthma, impeded respiratory responding to the reduced adenosine content of the anti-sense oligos corresponding to the oligonucleotides into products that free adenosine into the system content any unwanted effects due to it unwanted effects due to first active agent,
